WORK EXPERIENCE

Software Developer Eufinity Solutions

04/2024 - Present Braga, Portugal

Achievements/Tasks

- Full-stack development and maintenance of ERP systems, responsible for the development of end-to-end features
- Integrated our software with automatic payment terminals across multiple countries (Portugal and Cyprus)
- Implemented SAF-T (PT) solutions in compliance with Portuguese legislation
- Investigated, debugged and resolved application and API issues by analysing code, logs and system behaviour

PERSONAL PROJECTS

NestJS API Template

- A production-ready NestJS API template that includes built-in authentication, OpenAPI (Swagger), TypeORM setup, rate limiting, and other common features. It was designed to help people start new projects quickly by focusing on actual business logic instead of boilerplate. Developed collaboratively with two teammates, this project represents a blend of our shared ideas, existing knowledge, and new skills acquired throughout the development process. It was an exciting team effort and remains an ongoing project that we continue to refine and improve regularly.

Developer Portfolio

- Single-page developer portfolio built with React, TypeScript and Vite. It uses a modular grid layout with reusable panels, plus overlay dialogs for detailed views, all styled with a custom and responsive design. This portfolio became one of the most interesting projects I have worked on, since I managed to learn React, which was the primary goal when I decided to develop the website, as well as to complete an objective of mine of having my own domain with my CV.

Currency Converter

- Built a web-based currency converter that provides real-time exchange rate updates. The application allows users to quickly convert between multiple currencies using live market data. It includes a responsive design, intuitive user interface, and integration with APIs to ensure accurate and up-to-date currency conversions.

EDUCATION

Bachelor's Degree in Biomedical Engineering

University of Trás-os-Montes and Alto Douro

10/2020 - 07/2023

Courses

- Undergraduate Project - Developed two models using deep learning to automatically detect landmarks in x-ray images

SKILLS

JavaScriptTypescriptJavaC++Node.js

AngularSpring BootReactPostgreSQL

Microsoft SQL ServerNestJSTypeORM

Sequelize.jsETLERPTechnical Support

GitDevOpsDockerREST APIshTML

PythonC#CSSMongoDBKafka

ACHIEVEMENTS

Detection of Landmarks in X-Ray Images through Deep Learning - Publication on Springer

CERTIFICATES

IBM DevOps and Software Engineering Professional Certificate

Aquisition of skills related to software development using Agile and Scrum methodologies

IBM Back-End Development Professional Certificate

Aquisition of skills related to Back-End development

LANGUAGES

Portuguese
Native or Bilingual Proficiency

English
Full Professional Proficiency
